Waiting Times and Patient Satisfaction with Anesthesia Preoperative Evaluation Clinics

Franklin Dexter, MD PhD FASA
Director, Division of Management Consulting Consulting Professor, Department of Anesthesia
University of Iowa
Franklin-Dexter@UIowa.edu
www.FranklinDexter.net
Financial Disclosure

• I am employed by the University of Iowa, in part, to consult and analyze data for hospitals, anesthesia groups, and companies

• Department of Anesthesia bills for my time, and the income is used to fund our research
  – I receive no funds personally other than my salary and allowable expense reimbursements from the University of Iowa, and have tenure with no incentive program
  – I own no healthcare stocks (other than indirectly through mutual funds)
As you “Record your answer,” count how many of the 16 questions answered correctly
- No credit for questions not answered
• At end of lecture, submit your count in poll
• Evaluate how well you and your colleagues can predict results of management studies
  - All questions have 1 correct (best) answer
Preoperative Clinic Waiting Topics to be Covered

- Patients’ principal concern – communication
- Patients’ principal preventable concern
- Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
- Typical ratios of mean waiting time to mean evaluation time
- Two options for reducing mean waiting time
- Priorities for preoperative clinic scheduling and management with few or no drawbacks
- Predicting mean evaluation time
Most Important Preanesthesia Concerns of Patients

➢ Survey

Aust H et al. Anaesthetist 2011
Most Important Preanesthesia Concerns of Patients

• Survey
  – Do not have to go to the clinic
  – Waiting time in clinic is a few minutes
  – Interview by the anesthesiologist who will do anesthetic
  – Computer and video assisted materials
  – Convenient seating, drinks, and snacks

Aust H et al. Anaesthetist 2011
Most Important Preanesthesia Concerns of Patients

• Survey
  – Do not have to go to the clinic
  – Waiting time in clinic is a few minutes
  – Interview by the anesthesiologist who will do anesthetic
  – Computer and video assisted materials
  – Convenient seating, drinks, and snacks

Record your answer
Most Important Preanesthesia Concerns of Patients

- Survey
  - Do not have to go to the clinic
  - Waiting time in clinic is a few minutes
  - Interview by the anesthesiologist who will do anesthetic
  - Computer and video assisted materials
  - Convenient seating, drinks, and snacks
Most Important Preanesthesia Concerns of Patients

• Survey
  – Do not have to go to the clinic 10%
  – Waiting time in clinic is a few minutes 28%
  – Interview by the anesthesiologist who will do anesthetic 51%
  – Computer and video assisted materials 6%
  – Convenient seating, drinks, and snacks 6%
As you “Record your answer,” count how many of the 16 questions answered correctly – No credit for questions not answered

Keep track of your count of correct answers

At end of lecture, submit your count in poll

Evaluate how well you and your colleagues can predict results of management studies – All questions have 1 correct (best) answer
Most Important Preanesthesia Concerns of Patients

• Randomization to one of four groups
  – Time spent at evaluation was either: typical or increased by 50%, to be empathetic, to ask about anxiety, discuss concerns, etc.
  – Same or different anesthesiologist evaluated patient in clinic and cared for them in OR
• No saying “nice to see you again,” etc.

Most Important Preanesthesia Concerns of Patients

• Difference in satisfaction achieved by more time with patient and an empathetic attitude
  – 20% more satisfied
  – 15% more satisfied
  – 10% more satisfied
  – 5% more satisfied
  – No difference (+/- 2%)
  – 5% less satisfied
Most Important Preanesthesia Concerns of Patients

• Difference in satisfaction achieved by more time with patient and an empathetic attitude
  – 20% more satisfied
  – 15% more satisfied
  – 10% more satisfied
  – 5% more satisfied
  – No difference (+/- 2%)
  – 5% less satisfied

Record your answer
Most Important Preanesthesia Concerns of Patients

- Difference in satisfaction achieved by more time with patient and an empathetic attitude
  - 20% more satisfied
  - 15% more satisfied
  - 10% more satisfied
  - 5% more satisfied
  - **No difference (+/- 2%)**
  - 5% less satisfied
Most Important Preanesthesia Concerns of Patients

• Difference in satisfaction from having *same anesthesiologist*
  – 20% more satisfied
  – 15% more satisfied
  – 10% more satisfied
  – 5% more satisfied
  – No difference (+/- 2%)
  – 5% less satisfied
Most Important Preanesthesia Concerns of Patients

- Difference in satisfaction from having same anesthesiologist
  - 20% more satisfied
  - 15% more satisfied
  - 10% more satisfied
  - 5% more satisfied
  - No difference (+/- 2%)
  - 5% less satisfied

➢ Record your answer
Most Important Preanesthesia Concerns of Patients

- Difference in satisfaction from having same anesthesiologist
  - 20% more satisfied
  - 15% more satisfied
  - 10% more satisfied
  - 5% more satisfied
  - No difference (+/- 2%)
  - 5% less satisfied
Most Important Preanesthesia Concerns of Patients

• Difference in satisfaction from having same anesthesiologist
  - 20% more satisfied
  - 15% more satisfied
  - 10% more satisfied
  - 5% more satisfied
  - No difference (+/- 2%) 
  - 5% less satisfied

➢ Thus, greatest concern in observational study and substantive effect in randomized trial
Most Important Preanesthesia Concerns of Patients

- % patients who correctly identified whether anesthesiologist in clinic was the same or different from the one in OR?
  - 50%
  - 60%
  - 70%
  - 80%
  - 90%
  - 95%
Most Important Preanesthesia Concerns of Patients

Preoperative Clinic Waiting
Topics to be Covered

• Patients’ principal concern – communication
  ➢ Patients’ principal preventable concern
• Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
• Typical ratios of mean waiting time to mean evaluation time
• Two options for reducing mean waiting time
• Priorities for preoperative clinic scheduling and management with few or no drawbacks
• Predicting mean evaluation time
Preoperative Evaluation
Clinic Survey Findings

• Survey sent to patients after visit
• Which was their priority for improvement?
  – Reception (e.g., addressed in pleasant manner)
  – Waiting (e.g., waiting time)
  – Nurse (e.g., understandable answers)
  – Anesthesiologist (e.g., explanation of risks)
  – Other (e.g., brochure)

Preoperative Evaluation
Clinic Survey Findings

- Survey sent to patients after visit
- Which was their priority for improvement?
  - Reception (e.g., addressed in pleasant manner)
  - Waiting (e.g., waiting time)
  - Nurse (e.g., understandable answers)
  - Anesthesiologist (e.g., explanation of risks)
  - Other (e.g., brochure)

➢ Record your answer

  - Nurse (e.g., understandable answers)
  - Anesthesiologist (e.g., explanation of risks)
  - Other (e.g., brochure)
Preoperative Evaluation
Clinic Survey Findings

- Waiting time as construct can be highly correlated with “how clearly ... receptionist explain[s] what happens during the visit”

Stoddard DR et al. 2016 Mil Med
Preoperative Evaluation
Clinic Survey Findings

• Waiting time as construct can be highly correlated with “how clearly ... receptionist explain[s] what happens during the visit”

➢ Upon arrival, even if there will be substantial waiting, do prepare the patient for “what to expect during their visit”
Preoperative Clinic Waiting
Topics to be Covered

• Patients’ principal concern – communication
• Patients’ principal preventable concern
  ➢ Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
• Typical ratios of mean waiting time to mean evaluation time
• Two options for reducing mean waiting time
• Priorities for preoperative clinic scheduling and management with few or no drawbacks
• Predicting mean evaluation time
Waiting Times that Patients Consider Acceptable

Edward GM et al. Eur J Anaesthesiol 2010
Waiting Times that Patients Consider Acceptable

• Measure each patient’s waiting time and ask the patient if the wait was acceptable.

• What is maximum minutes of waiting that most (> 50%) patients consider acceptable?
  – 5 minutes
  – 10 minutes
  – 15 minutes
  – 20 minutes
  – 30 minutes
  – 40 minutes
Waiting Times that Patients Consider Acceptable

- Measure each patient’s waiting time and ask the patient if the wait was acceptable
- What is maximum minutes of waiting that most (> 50%) patients consider acceptable?
  - 5 minutes
  - 10 minutes
  - 15 minutes
  - 20 minutes
  - 30 minutes
  - 40 minutes

Record your answer for The Netherlands
Waiting Times that Patients Consider Acceptable

- What percentage of the patients considered waiting > 15 minutes to be acceptable?
  - 9%
  - 19%
  - 29%
  - 39%
  - 49%
Preoperative Clinic Waiting
Topics to be Covered

• Patients’ principal concern – communication
• Patients’ principal preventable concern
• Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
  ➢ Typical ratios of mean waiting time to mean evaluation time
• Two options for reducing mean waiting time
• Priorities for preoperative clinic scheduling and management with few or no drawbacks
• Predicting mean evaluation time
What Meant by “Waiting” from Scheduled Start Time

• Patient shows up 1.5 hours early and is seen 1.0 hours after arrival
  – Waiting ("tardiness") = 0 minutes
• Scenario shows definition is not a limitation
  – Patients are scheduled to be seen by a provider at 8:00 AM, 8:30 AM, ...
  – However, every patient arrives at 8:00 AM
  – If measure of waiting starts at 8:00 AM, then same as having 100% walk in clinic
What Meant by “Waiting” from Scheduled Start Time

• Patient scheduled for 10:00 AM appointment
• Patient arrives at 9:55 AM
• Chart is reviewed starting at 9:56 AM
• Patient is seen starting at 10:45 AM
• Waiting (tardiness) from patient perspective is 45 minutes
Rule of Thumb (Heuristic) on Clinic Waiting Time

- Mean waiting time > mean consultation time
  - For scheduled appointments
    - Actual ratios 1.5, 1.8, and 1.9
  - For unscheduled appointments
    - Ratios larger than 2.0
  - Important issue is not the ratio, but that the waiting time > consultation time

Dexter F. Anesth Analg 1999
Mean Waiting Times and Mean Evaluation Times

- Mean preoperative evaluation time was 13 minutes
- What was the clinic’s mean waiting time?
  - 5 minutes
  - 10 minutes
  - 13 minutes
  - 16 minutes
  - 25 minutes

Edward GM et al. Eur J Anaesthesiol 2010
Mean Waiting Times and Mean Evaluation Times

• Mean preoperative evaluation time was 13 minutes

• What was the clinic’s mean waiting time?
  – 5 minutes
  – 10 minutes
  – 13 minutes
  – 16 minutes
  – 25 minutes

➢ Record your answer
Mean Waiting Times and Mean Evaluation Times

• Mean preoperative evaluation time was 13 minutes
• What was the clinic’s mean waiting time?
  – 5 minutes
  – 10 minutes
  – 13 minutes
  ✓ 16 minutes
  – 25 minutes
Rule of Thumb (Heuristic) on Clinic Waiting Time

• Ratio is consequence of the coefficient of variation of evaluation times and perceptions of reasonable patient and staffing idle times

• Applies to tasks that do not stop in middle
  – However, reasonable also for amusement park rides balancing duration and walkup rate
  – Does not apply to time with counselor
Preoperative Clinic Waiting Topics to be Covered

- Patients’ principal concern – communication
- Patients’ principal preventable concern
- Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
- Typical ratios of mean waiting time to mean evaluation time
  - Two options for reducing mean waiting time
- Priorities for preoperative clinic scheduling and management with few or no drawbacks
- Predicting mean evaluation time
Options to Meet Most Patients’ Expectations for Waiting
Options to Meet Most Patients’ Expectations for Waiting

- Preoperative evaluation first on day of surgery?
Options to Meet Most Patients’ Expectations for Waiting

- Preoperative evaluation first on day of surgery?
- Not wise choice since consequent increase mean turnover time among the 88% of all patients who were ASA Physical Status 2 or 3:
  - 2 minutes
  - 5 minutes
  - 8 minutes
  - 12 minutes
  - 16 minutes

Options to Meet Most Patients’ Expectations for Waiting

- Preoperative evaluation first on day of surgery?
- Not wise choice since consequent increase mean turnover time among the 88% of all patients who were ASA Physical Status 2 or 3:
  - 2 minutes

Preoperative Clinic Waiting Topics to be Covered

- Patients’ principal concern – communication
- Patients’ principal preventable concern
- Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
- Typical ratios of mean waiting time to mean evaluation time
- Two options for reducing mean waiting time
  - Priorities for preoperative clinic scheduling and management with few or no drawbacks
- Predicting mean evaluation time
Clinic Scheduling Approaches to Reduce Mean Waiting Time

- Assure providers start working on time
- If cannot adjust provider availability hourly to match walk-in demand, schedule patients
  - Achieves near even workload among hours of day, even if many patients arrive earlier or later than appointment

Dexter F. Anesth Analg 1999
Clinic Management Approaches to Reduce Mean Waiting Time

• Do not schedule patients to specific provider
  – Each provider is busy when patient(s) is waiting
  – If prepopulate record before patient arrives, any provider can complete the evaluation

• Do not assign patients to specific providers based on the relative speeds of the providers
  – Focus attention on having a sufficient total number of providers available to see patients

Dexter F. Anesth Analg 1999
Dexter F et al. Anesth Analg 2013
Preoperative Clinic Waiting Topics to be Covered

• Patients’ principal concern – communication
• Patients’ principal preventable concern
• Most patients’ maximum acceptable waiting time in preoperative evaluation clinic
• Typical ratios of mean waiting time to mean evaluation time
• Two options for reducing mean waiting time
• Priorities for preoperative clinic scheduling and management with few or no drawbacks

➢ Predicting mean evaluation time
Predicting Mean Evaluation Time

• Which is the most accurate predictor?
  – Number of medications
  – ASA physical status
  – Surgical procedure complexity (ASA base units)
  – Time of day (e.g., longer evaluations later)
  – Age

Predicting Mean Evaluation Time

• Which is the most accurate predictor?
  – Number of medications
  – ASA physical status
  – Surgical procedure complexity (ASA base units)
  – Time of day (e.g., longer evaluations later)
  – Age

➢ Record your answer
Predicting Mean Evaluation Time

• Which is the most accurate predictor?
  ➢ Number of medications, P < 0.0001
  – ASA physical status
  – Surgical procedure complexity (ASA base units)
  – Time of day (e.g., longer evaluations later)
  – Age
Using Medication List from Electronic Medical Record

- Updated since component of "meaningful use"
- When scheduling appointment, look at the list
- Obtain corresponding appointment duration from two column table
  - Example: printed and kept at computer

Smallman B, Dexter F. Anesth Analg 2010
Using Medication List from Electronic Medical Record

- Patients with 0 to 2 medications could be scheduled for 25 minutes
  - 25 minutes = 1.21 × mean 20 minutes
  - Value of 1.21 compensates for factors that tend to increase patient waiting
- Patients with 12 to 20 medications could be scheduled for 45 minutes
  - 45 minutes = 1.21 × mean 35 minutes

Dexter F. Anesth Analg 1999
